

## Bulletin 5 | 7 September 2020

The water level in Mopti has increased to 592 cm on 7 September. That is high in comparison to all water levels measured on this date in the last fifty years, but it is still 18 and 13 cm below the water level measured on this date in two years with an extremely high flood, namely 2016 and 2018.

The water level in Mopti has increased to 592 cm on 7 September. That is high in comparison to all water levels measured on this date in the last fifty years, but it is still 18 and 13 cm below the water level measured on this date in two years with an extremely high flood, namely 2016 and 2018.

The flood prediction of OPIDIN has not changed the last three weeks. The peak flood level in Mopti will likely be between 650 and 670 cm and thus still rise the coming weeks about 70 cm. The flood will most likely be about as high as 2016 and 2018 and (much) higher than all other recent years.
